TUNED ABSORBER / DIFFUSER PANEL

TUNED ABSORBER/DIFFUSER (TAD) PANELS COMBINE ENGINEERED ACOUSTICS AND A CHOICE OF FABRIC OR VINYL COVERINGS TO GIVE YOU AN EXCELLENT DESIGN SOLUTION WHERE MORE BALANCED SOUND ABSORPTION AND HIGH FREQUENCY DIFFUSION ARE DESIRABLE.

Place the **Tuned Absorber/Diffuser** where low and mid-frequency absorption is desired in conjunction with increasing reflectivity and diffusion in higher frequencies. The outstanding acoustical performance of this panel is the result of the assembly of a sound absorptive fibrous core covered with a variable impedance laminate. Openings in the laminate are sized and spaced to optimize the absorption in low to mid frequencies while creating random higher frequency reflective surfaces between openings (variable impedance).

A design program is utilized to acoustically optimize the hole pattern in the laminate while maintaining the desired overall open versus reflective area in the panel surface. For increased low frequency sound absorption, a thicker fibrous core (2" to 4") can be specified. For increased high frequency absorption, the hole size can be changed to 5/8" diameter versus the standard 1/2" opening.
